

CHANGLANG DISTRICT

District Development & Government Schemes Monitoring Dashboard

Concept Proposal for District Administration | Prepared for consideration of the Deputy Commissioner

Purpose	To create a single digital platform for monitoring the progress of all major departments, schemes, projects, beneficiaries and financial/physical achievements at District level.
----------------	---

1. Vision

The proposed dashboard will provide the District Administration with a unified view of development programmes. Instead of collecting separate reports from different departments for every review meeting, key information can be entered or integrated into one system and displayed through simple indicators, charts, tables and maps.

2. Proposed Dashboard Structure

DISTRICT ADMINISTRATION
District Development Dashboard
Departments Schemes Indicators Projects Beneficiaries Finance
Central Database / Data Repository
Reports • Analytics • Alerts • GIS/Map • PDF/Excel Export

3. District Home Page – Key KPIs

KPI	What it shows
Total Departments	Departments participating in the dashboard
Total Schemes	Central / State / District schemes being monitored
Total Projects	Infrastructure and development projects
Total Beneficiaries	Beneficiaries covered by schemes
Total Allocation	Budget / funds allocated
Total Expenditure	Amount spent
Physical Progress	Target versus achievement
Financial Progress	Funds received versus expenditure
Pending / Delayed	Schemes or activities requiring attention

4. Department-wise Monitoring

Each department will have a dedicated page showing its overall performance and the status of its schemes/projects.

Department	Physical Progress	Financial Progress	Status
Education	92%	88%	Green
Health	86%	82%	Green
PWD	64%	58%	Yellow
RWD	48%	52%	Red
Agriculture	81%	76%	Green

5. Scheme-level Monitoring

Every scheme should have a unique Scheme ID and a standard set of indicators. This will prevent duplicate reporting and ensure that departments use the same definitions for target, achievement and financial progress.

Field	Example
Scheme ID	SCH-EDU-001
Department	Education
Scheme Name	PM POSHAN
Scheme Type	Central / State / District
Financial Year	2026-27
Implementing Agency	Concerned Department
Nodal Officer	Name & Designation
Reporting Frequency	Monthly / Quarterly

6. Physical & Financial Indicators

Category	Key fields
Physical	Annual Target, Monthly/Quarterly Target, Achievement, Progress %
Financial	Allocation, Funds Received, Funds Released, Expenditure, Balance, UC Status
Beneficiary	Total, New, Gender-wise and other officially relevant categories
Location	District, Block/Circle, Village, project location
Time	Financial Year, Month/Quarter, Last Updated

7. Drill-down: District → Department → Scheme → Location

Example: Changlang District → Rural Development → PMAY-G → Nampong Circle → Village X → Houses Sanctioned / Under Construction / Completed / Pending → Funds & Expenditure.

This drill-down will allow the District Administration to move from a district-level summary to the exact scheme and location requiring intervention.

8. User Roles & Data Flow

User	Access
District Administration / DC	View all departments, schemes, KPIs, alerts and reports
Department Nodal Officer	Enter/update data for own department
Block/Circle Officer	Enter/update assigned geographical data, where applicable
District Technical Administrator / DIO	User management, system administration, validation and technical monitoring

9. Data Validation & Alerts

- Achievement should not exceed the approved target unless the indicator permits it.
- Expenditure should be checked against available funds.
- Mandatory fields should not be left blank.
- Duplicate scheme/indicator records should be prevented.
- Departments that do not update data by the reporting deadline should be flagged.
- All updates should carry a date/time and user identity for audit purposes.

10. Traffic-Light Monitoring

Status	Indicative rule	Purpose
Green	$\geq 90\%$	Satisfactory progress
Yellow	60–89%	Requires monitoring
Red	$< 60\%$	Requires attention/intervention

Note: Thresholds should be configurable by scheme/indicator because different programmes may require different benchmarks.

11. GIS / Map-based View

Where reliable location data is available, the dashboard can include a map showing schemes, projects and development activities by Block/Circle and village. Clicking a location can display the schemes, beneficiaries, progress and pending work.

12. Reports & Outputs

- Monthly District Development Progress Report
- Department-wise Performance Report
- Scheme-wise Physical and Financial Progress
- Block/Circle-wise Performance
- Pending / Delayed Scheme Report
- Beneficiary Coverage Report
- PDF and Excel export for review meetings

13. Suggested Technical Architecture

Layer	Suggested approach
Frontend	Web-based dashboard using a modern responsive interface
Backend	Secure government-grade web application (e.g., Django/Java/Spring Boot or approved stack)
Database	PostgreSQL / other approved relational database
Charts	Interactive charts and KPI cards
GIS	Approved GIS platform / map layer where applicable
Authentication	Government/NIC-approved authentication mechanism
Hosting	Approved government/NIC infrastructure, subject to security policy
Audit & Backup	User activity logs, scheduled database backup and recovery mechanism

14. Implementation Roadmap

Phase	Activity
Phase 1	Identify departments, schemes and priority indicators
Phase 2	Prepare Department/Scheme/Indicator Master and common data-entry template
Phase 3	Collect baseline data and validate with departments
Phase 4	Develop pilot dashboard with selected departments
Phase 5	User testing, correction and approval
Phase 6	Roll out to all departments
Phase 7	Add GIS, integrations/API and automated reports in later stages

15. Immediate Action Proposed

Before software development begins, the District should prepare a common data template for all departments. The first deliverable should therefore be a **Department + Scheme + Indicator Master** with target, achievement, financial, beneficiary and location fields. This will establish a standard data structure for the dashboard.

Expected outcome	A single, reliable and review-oriented dashboard through which the District Administration can quickly identify progress, gaps, delayed activities and priority areas, and can conduct evidence-based departmental reviews.
